# Front-end

React Component(s): Club Admin Edit Profile Component

Parent Class (if any): N/A
Subclasses (if any): N/A

Responsibilities:

• Allow club admin to edit the profile page including, contact info, description of club, and profile picture.

Collaborators:

• AuthCheck

React Component(s): Club Admin View Profile Component

Parent Class (if any): N/A
Subclasses (if any): N/A

Responsibilities:

• Displays the current profile page of the club associated with the club admin

Collaborators:

• AuthCheck

React Component(s): Club Admin Profile Page

Parent Class (if any): N/A
Subclasses (if any): N/A

Responsibilities:

• Allow the Club Admin to go into edit mode or remain in view profile mode.

Collaborators:

• Club Admin View Profile Component
• Club Admin Edit Profile Component
• AuthCheck

React Component(s): Event Form (Club View)

Parent Class (if any): N/A Subclasses (if any): N/A

#### Responsibilities:

- Knows the logged in club's name
- Knows the event name input
- Knows the event image input
- Knows the event start time input
- Knows the event end time input
- Knows the event location input
- Knows the event description input
- Knows the event's attendees
- Knows the event tags input
- When submit button is clicked, a post request gets submitted using api endpoint in events router, and then redirect to club profile
- When delete button is clicked, redirect to previous page

### **Collaborators:**

AuthCheck

React Component(s): StudentEventCard

Parent Class (if any): N/A Subclasses (if any): N/A

# Responsibilities:

- Displays eventName, organizer's name, start and end times, location, tags, more info in collapse card component
- Reformats date, start and end times to display in "mmmm dS, yyyy" and "HH:mm" (shortTime), respectively

# **Collaborators:**

AuthCheck

React Component(s): RegisterForm

Parent Class (if any): React.Component

Subclasses (if any): N/A

# Responsibilities:

- Lets user input username and password
- Shows verification input field when required
- Allows user to input verification code
- Once verified, redirects user to the login screen
- Perform basic verification on registration details
- If any error, show them on corresponding fields at tiny subtext

#### **Collaborators:**

- Login
- AuthCheck

React Component(s): Login

Parent Class (if any): React.Component

Subclasses (if any): N/A

### Responsibilities:

- Allows the user to input an email and password and login
- Logs user in and sets cookie if credentials match database
- Knows the current state of the register form
- Redirects user to home page if already logged in
- Displays error message if password is incorrect or if the user doesn't exist

### **Collaborators:**

AuthCheck

React Component(s): NavBar

Parent Class (if any): React.Component

Subclasses (if any): N/A

## Responsibilities:

- Sets navbar components
- Changes color when clicked on different components

# **Collaborators:**

**React Component(s):** AllClubs (Student View)

Parent Class (if any): React.Component

Subclasses (if any): N/A

# Responsibilities:

- Provides megaview for club
- Check database for clubs
- Display club information from above
- Consists of:
  - Club Banner
  - o Club Name
  - o Club Phone Number
  - Club Email
  - And a View Club button

## **Collaborators:**

- ClubsApplyButton
- AuthCheck

React Component(s): ClubsApplyButton

Parent Class (if any): React.Component

Subclasses (if any): N/A

# Responsibilities:

• Access the applyMember endpoint onclick

#### **Collaborators:**

- AllClubs
- AuthCheck

React Component(s): NewAnnouncement

Parent Class (if any): N/A
Subclasses (if any): N/A

Responsibilities:

• Knows the announcement subject
• Knows the announcement message
• Knows the recipients
• When send button is pressed, a post request is made using api endpoint in announcements route, and then user is redirected to home page
• When cancel button is pressed, clear form and redirect to home

React Component(s): Club Admin Main Page

Parent Class (if any): N/A
Subclasses (if any): N/A

Responsibilities:

Allow the Club Admin to view and scroll existing members of the club
Allow the Club Admin to accept and deny users that have applied to join the club

React Component(s): Positions

Parent Class (if any): React.Component
Subclasses (if any): N/A

Responsibilities:

Provides megaview for all job postings
Check database for positions
Display posting information from above
Consists of:
Job Position
Club Name
Club Email
And a View Club button

React Component(s): PositionsCard	
Parent Class (if any): React.Component Subclasses (if any): N/A	
Responsibilities:  • Format for the Position map in "Positions" page • Includes minimal pseudo-styling	Collaborators:

React Component(s): PositionForm	
Parent Class (if any): React.Component Subclasses (if any): N/A	
Responsibilities:     • Format for the Position form in "PositionCreate" page     • Includes styling	Collaborators: AuthCheck

React Component(s): Club Register Request Form

Parent Class (if any): N/A Subclasses (if any): N/A

# Responsibilities:

- Knows the club name
- Knows the club email
- Knows the club phone number (if entered)
- Knows the club tags
- Knows the club description
- If the submit button is clicked, the entered data is validated, written to the database, then redirected to a confirmation page
- If input is invalid, an error message is displayed
- If the cancel button is clicked, the user is redirected to the home page

#### **Collaborators:**

AuthCheck

React Component(s): MyClubs

Parent Class (if any): React.Component

Subclasses (if any): N/A

## Responsibilities:

- Provides minimal view of all clubs that user is part of
- Check database for registered club members
- Display posting information from above consisting of the club name and a hyperlink to the club

#### **Collaborators:**

AuthCheck

React Component(s): MyClubsCard  Parent Class (if any): React.Component Subclasses (if any): N/A	

Class Name: My Accounts		
Parent Class (if any): Subclasses (if any):		
Responsibilities:	Collaborators:	

Class Name: My Events	
Parent Class (if any): Subclasses (if any):	
Responsibilities:  • showing user events	Collaborators:

Class Name: AuthCheck		
Parent Class (if any): React.Component Subclasses (if any):		
Responsibilities:	Collaborators:	

# Back-end

Class Name: User	
Parent Class (if any): Subclasses (if any):	
Responsibilities: <ul> <li>Knows its email and password</li> <li>Know what type of account credentials are attached to</li> </ul>	Collaborators:

Class Name: Student	
Parent Class (if any): Subclasses (if any):	
Responsibilities: <ul> <li>Knows its real name</li> <li>Knows associated User Object</li> <li>Knows all ids of clubs she/he a general member of</li> <li>Knows all ids of clubs he/she follows</li> </ul>	Collaborators:  • User

Class Name: Club	
Parent Class (if any): Subclasses (if any):	
Responsibilities:  • Knows its name	Collaborators:
<ul> <li>Knows its name</li> <li>Keeps track of its general members</li> <li>Knows its categories/tags</li> <li>Keeps track of</li> </ul>	•

Class Name: Event	
Parent Class (if any): Subclasses (if any):	
Responsibilities:	Collaborators:
<ul> <li>Knows its organizer's name</li> </ul>	
<ul> <li>Knows its name</li> </ul>	•
<ul> <li>Knows its image</li> </ul>	
<ul> <li>Knows its start time</li> </ul>	
<ul> <li>Knows its end time</li> </ul>	
<ul> <li>Knows its location</li> </ul>	
<ul> <li>Knows its description</li> </ul>	
<ul> <li>Knows its attendees</li> </ul>	
<ul> <li>Knows its tags/categories</li> </ul>	
Knows its tags/categories	

Class Name: Tags	
Parent Class (if any): Subclasses (if any):	
Responsibilities:  • Keeps track of event and club tags	Collaborators:

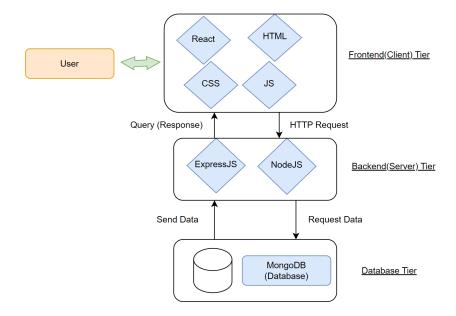

Class Name: usersDAO  Parent Class (if any): Subclasses (if any):		

Class Name: adminProfileDAO		
Parent Class (if any): Subclasses (if any):		
Responsibilities:      Performing database operations on clubs and club specific events     Inserting image strings     Querying club profile information     Fetching event details specific to the club	Collaborators:	
Class Name: emailWrapper		
Parent Class (if any): Subclasses (if any):		
Responsibilities:  • Sending a verification email	Collaborators:	
Class Name: membershipDAO		
Parent Class (if any): Subclasses (if any):		
Responsibilities:  • Finding and adding club membership applications in the database	Collaborators:	

Class Name: cookieDAO		
Parent Class (if any): Subclasses (if any):		
Responsibilities:  • Getting and setting cookies	Collaborators:	
Class Name: clubMainDAO		
Parent Class (if any): Subclasses (if any):		
Responsibilities:      Performing database operations on club members and club applicants     Fetching club members and club applicants     Removing club applicants on deny     Inserting club members on accept	Collaborators:	

# **Three Tier Architecture**

This project utilized the Three Tier Architecture (MERN Stack). The user interacts with React (the client) frontend of the web application. Any user requests will enable React to send a HTTP request to the application server which is written using NodeJS and ExpressJS. The server then serves the client by accessing the MongoDB database.

# **System Decomposition**

The system architecture has three separate parts: the database, the frontend, and the backend. The frontend is what the users will be interacting with. The frontend is developed using React and its components. We also used Material UI for universal styling and creating smoother working components. We also call the API endpoints that the backend provides using the fetch call. This way we can allow for CRUD properties to be introduced in our application. The backend of the app was built using Node.js and Express.js. Express is a popular node framework and has a lot of benefits. One of the ones we used is for writing handlers for http requests at different URL paths (routes). This is how we set up the API endpoints that interact with our database (MongoDB).In our database, we have set up different collections for different objects such as clubs, events, and users. We have implemented input sanitation code to make sure we don't receive invalid inputs. And for invalid images, we have implemented pop-up alerts that show up on the user's screen.
